

Windows Remote Desktop Server

This server is for SECS users to remotely connect to a Windows environment and access SECS lab software. This server is **ONLY** licensed to handle 50 connections at one time.

Connecting to the SECS remote desktop server will mount the [SECS Network Drive](#) as the H Drive.

Connecting to Winterfell

(We updated our server recently to improve service. The new server is named Winterfell, but you can still use the previous server name, mash, it will redirect you to the new server, Winterfell)

 **Note:** You will need to Connect to the SECS [VPN](#) before connecting to the Windows Remote Desktop Server from off campus.

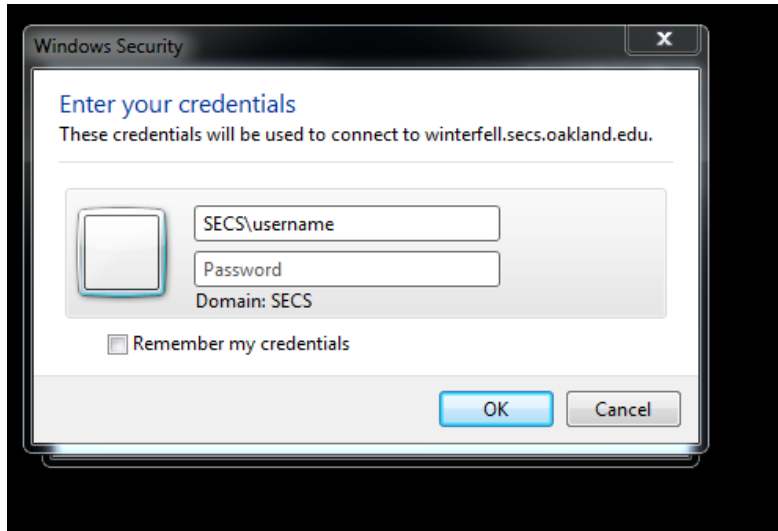

Windows: Follow the [Remote Desktop instructions](#) provided by Microsoft.

Mac: Download the Microsoft Remote Desktop app from the app store.

Use winterfell.secs.oakland.edu as the computer name to connect to.

Use your SECS credentials to log in. When off campus it is likely you may need to specify the domain when you log in. Inserting SECS before your SECS username will force the domain to SECS.

Connecting to .secs.oakland.edu will prompt the following warning message. Select Yes. If you would not like to see this warning message again, check the check box and then select Yes.

Software Available

- Abaqus
- Aldec Active-HDL
- Ansys ERSM
- COMSOL Multiphysics
- Dassault Systemes
- Digilent Software
- FEKO Suite
