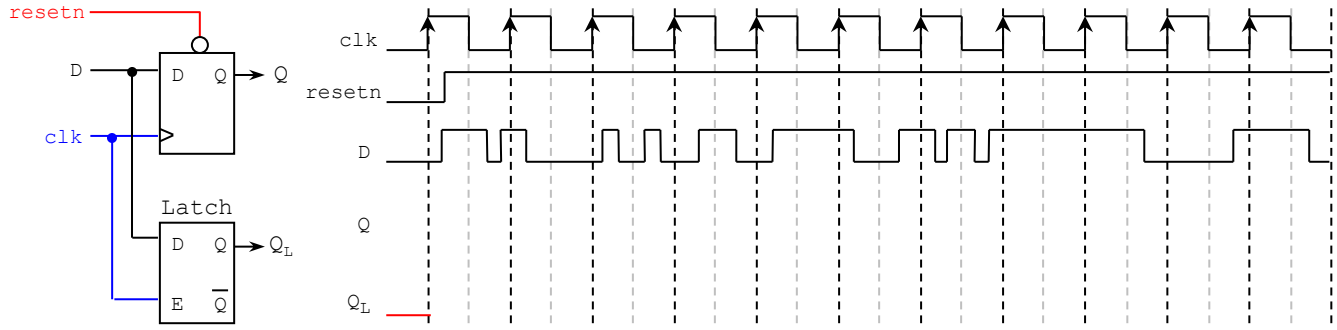
Homework 3

(Due date: March 17th @ 5:30 pm)

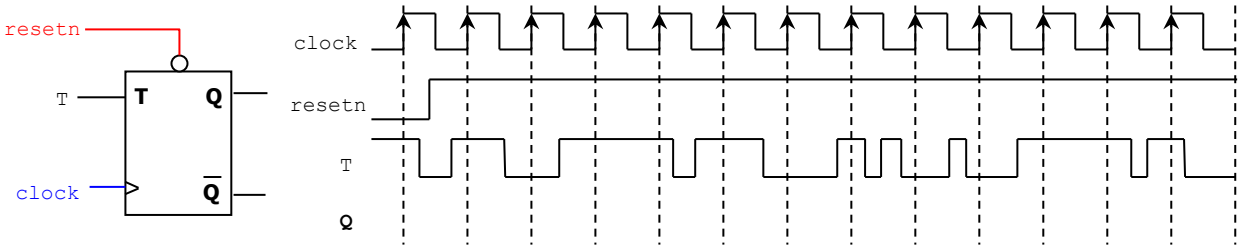
Presentation and clarity are very important! Show your procedure!

PROBLEM 1 (11 PTS)

a) Complete the timing diagram of the circuits shown below. (5 pts)

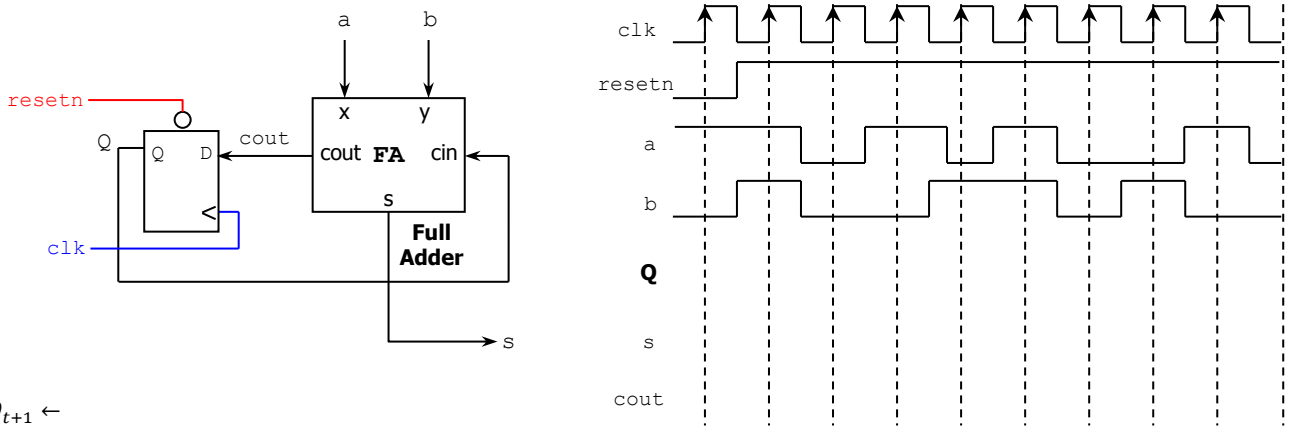


b) Complete the timing diagram of the circuit shown below: (6 pts)



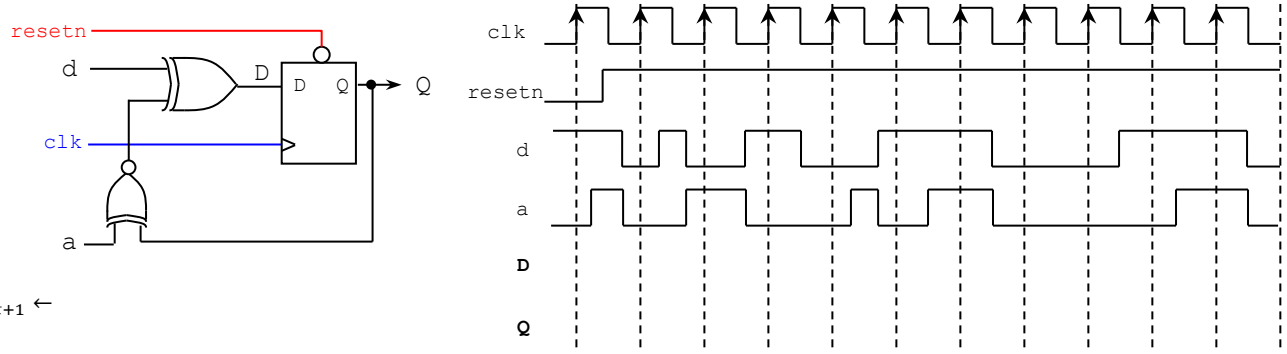
PROBLEM 2 (17 PTS)

- Complete the timing diagram of the circuit shown below. Get the excitation equation for Q (10 pts)



$Q_{t+1} \leftarrow$

- Complete the timing diagram of the circuit shown below. Get the excitation equation for Q. (7 pts)



$Q_{t+1} \leftarrow$

PROBLEM 3 (10 PTS)

a) Complete the timing diagram of the circuit whose VHDL description is shown below. Also, get the excitation equation for q.

```
library ieee;
use ieee.std_logic_1164.all;

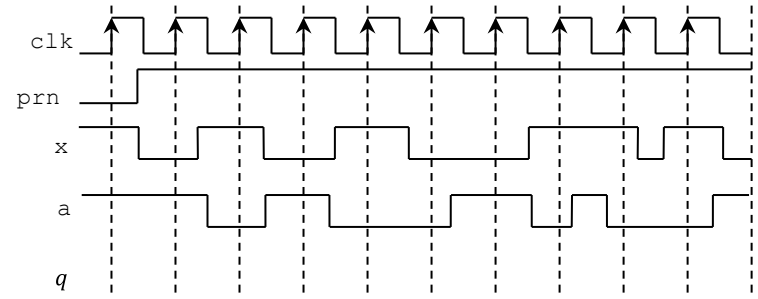
entity circ is
  port (prn, clk, a, x: in std_logic;
        q: out std_logic);
end circ;

architecture a of circ is

   signal qt: std_logic;

begin
   process (prn, clk, x, a)
   begin
     if prn = '0' then
        qt <= '1';
     elsif (clk'event and clk = '1') then
        if x = '1' then
           qt <= a xnor qt;
        end if;
     end if;
   end process;
   q <= qt;
end a;
```

$q(t+1) \leftarrow$

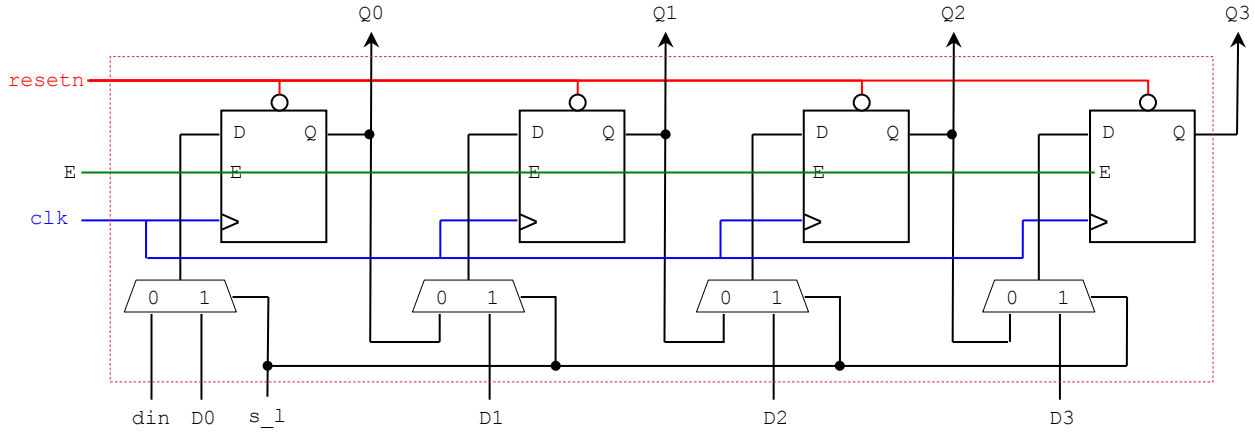


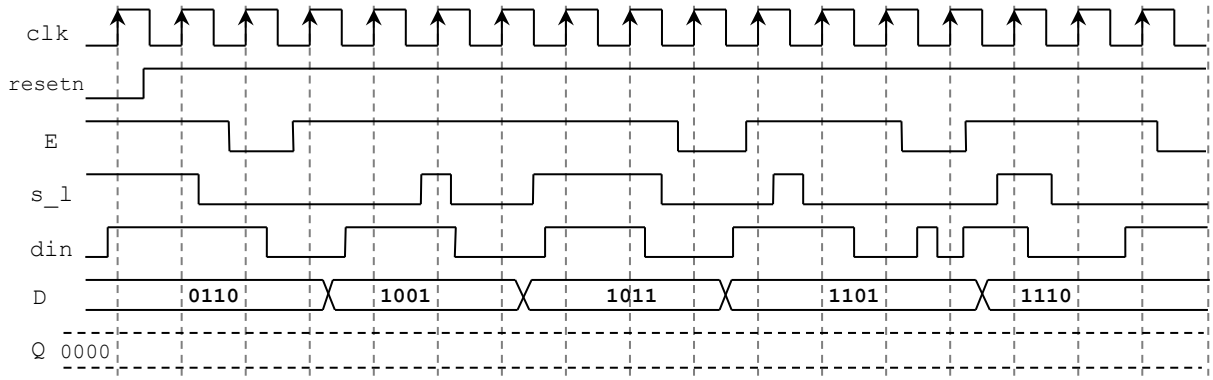
b) With a flip flop and logic gates, sketch the circuit whose excitation equations is given by (4 pts):

$$Q(t+1) \leftarrow (x+y) \oplus Q(t)$$

PROBLEM 4 (10 PTS)

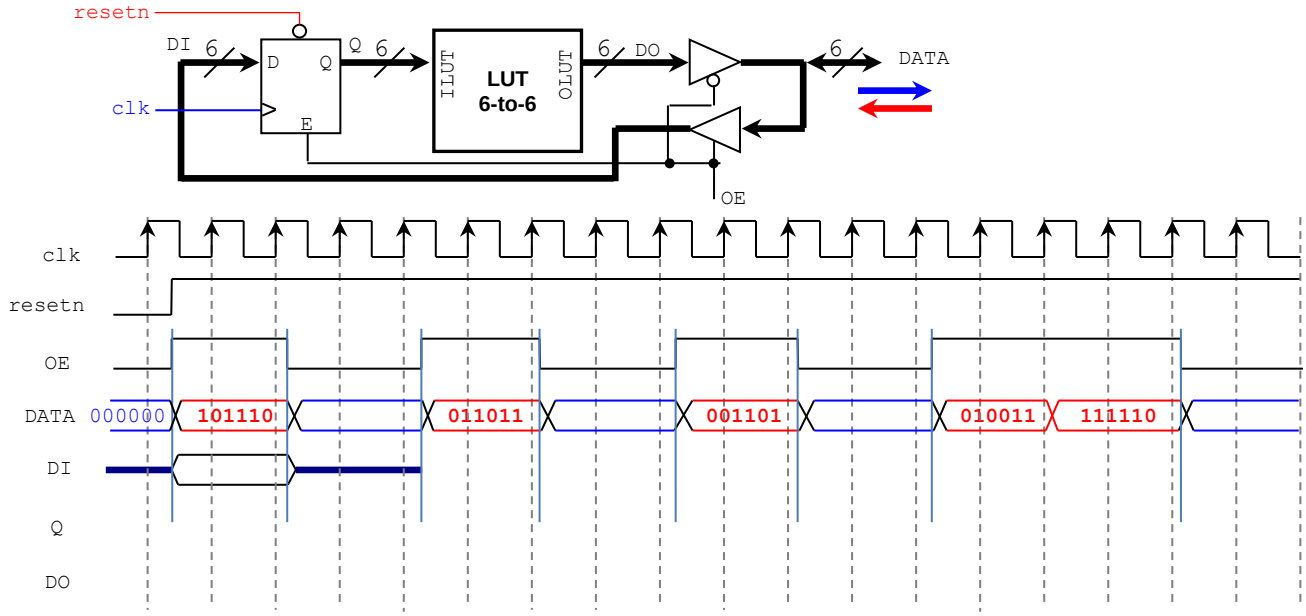
- Complete the timing diagram of the following 4-bit parallel access shift register with enable input.
  When `E=1`: If `s_l=0` (shifting operation). If `s_l=1` (parallel load) Note that $Q = Q_3Q_2Q_1Q_0$. $D = D_3D_2D_1D_0$





PROBLEM 5 (12 PTS)

- Given the following circuit, complete the timing diagram (signals DO, DI, Q, and $DATA$). The LUT 6-to-6 implements the following function: $OLUT = [ILUT^{0.5}]$, where $ILUT$ is an unsigned number.
  Example: $ILUT = 53\ (110101_2) \rightarrow OLUT = [53^{0.5}] = 8\ (001000_2)$

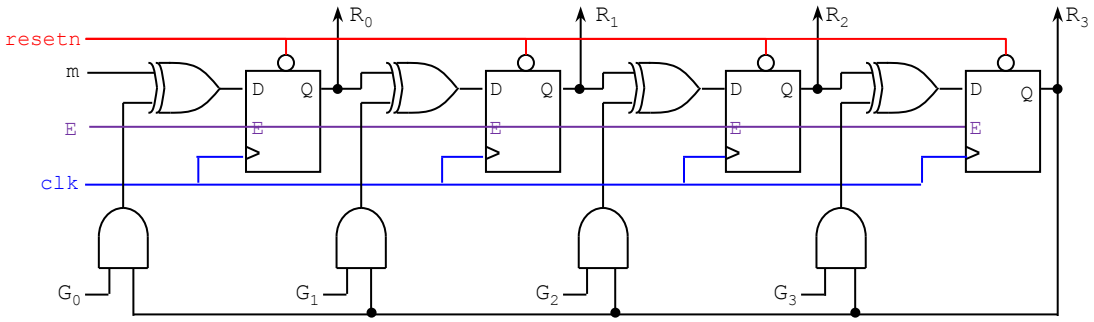


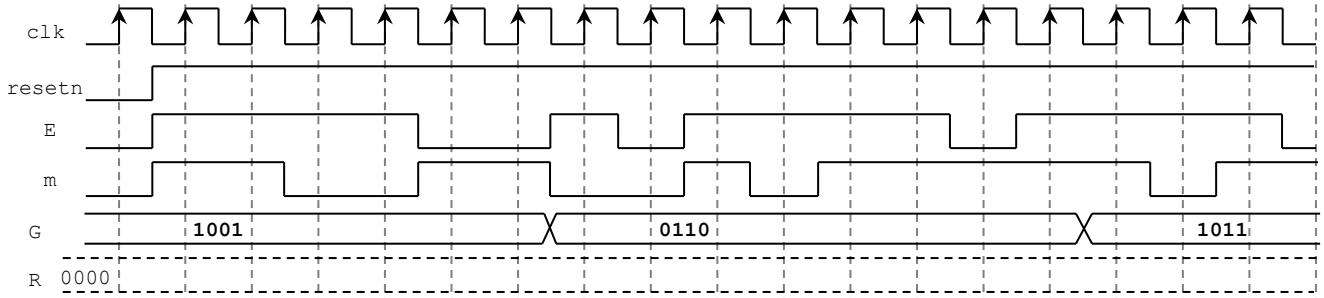
PROBLEM 6 (22 PTS)

a) For the following circuit, complete the timing diagram and get the excitation equations of the flip flop outputs. $R = R_3R_2R_1R_0$.
$R_3(t+1) \leftarrow$
$R_2(t+1) \leftarrow$
$R_1(t+1) \leftarrow$
$R_0(t+1) \leftarrow$

b) Write the VHDL for the given circuit and simulate your circuit.
- ✓ Write structural VHDL code. Create two files: i) flip flop, ii) top file (where you will interconnect the flip flops and the logic gates). (10 pts)
- ✓ Write a VHDL testbench according to the timing diagram shown below (100 MHz clock with 50% duty cycle). Run the simulation (Behavioral Simulation). Verify the results: compare them with the manually completed timing diagram (8 pts)

c) Upload (as a .zip file) the following files to Moodle (an assignment will be created):
- ✓ VHDL code files and testbench.
- ✓ A screenshot of your Vivado simulation results for (it should all the values for R).



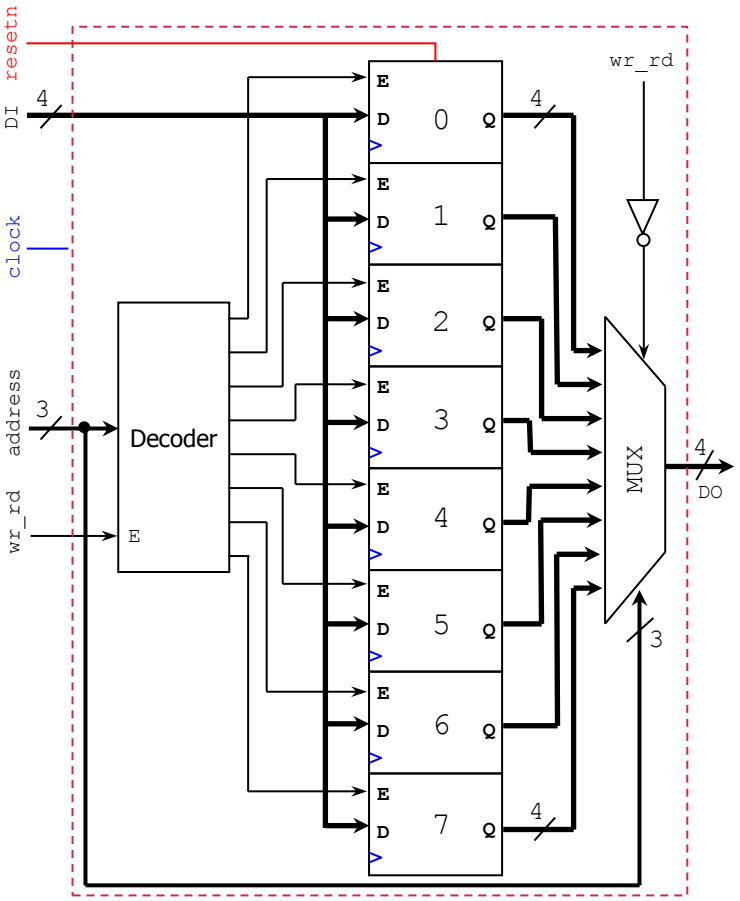


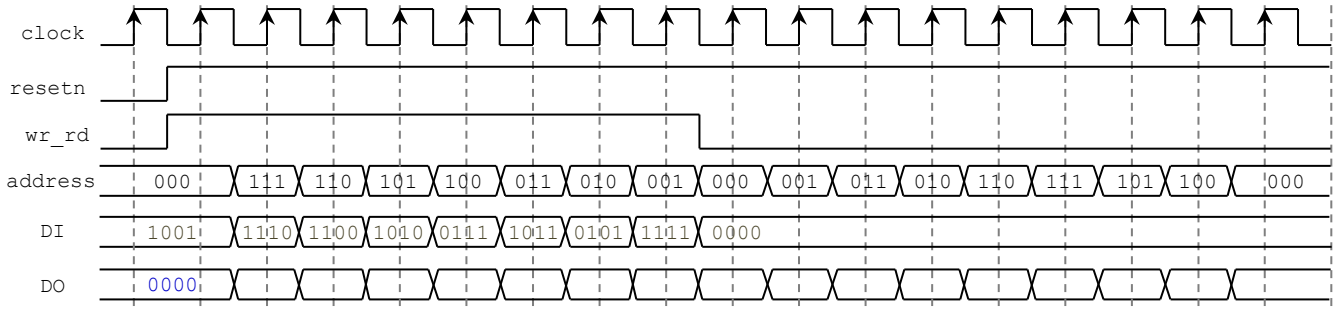
PROBLEM 7 (8 PTS)

- Complete the timing diagram (output DO) of the following Random Memory Access (RAM) Emulator.

- RAM Emulator: It has 8 addresses, where each address holds a 4-bit data. The memory positions are implemented by 4-bit registers. The *resetn* and *clock* signals are shared by all the registers. Data is written or read onto/from one of the registers (selected by the signal address).

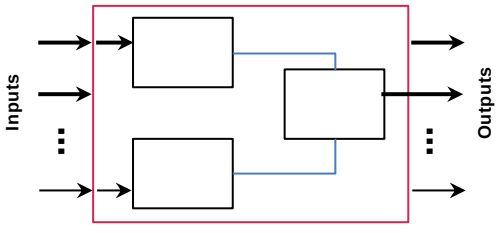
- Operations:
  - ✓ Writing onto memory (wr_rd='1'): The 4-bit input data (DI) is written into one of the 8 registers. The address signal selects which register is to be written.
    - For example: if address = "101", then the value of DI is written into register 5.
    - Note that because the BusMUX 8-to-1 includes an enable input, if wr_rd=1, then the BusMUX outputs are 0's.
  - ✓ Reading from memory (wr_rd='0'): The address signal selects the register from which data is read. This data appears on the BusMUX output.
    - For example: If address = "010", then data from register 2 appears on BusMUX output.





PROBLEM 8 (10 PTS)

- Attach your Project Status Report (no more than 1 page, single-spaced, 2 columns, only one submission per group). This report should contain the initial status of your project. For formatting, use the provided template (`Final Project - Report Template.docx`). The sections included in the template are the ones required in your Final Report. At this stage, you are only required to:
  - ✓ Include a (draft) project description and title.
  - ✓ Include a draft Block Diagram of your hardware architecture.



Block Diagram

- As a guideline, the figure shows a simple Block Diagram. There are input and output signals, as well as internal components along with their interconnection.
  - ✓ At this stage, only a rough draft is required. There is no need to go into details: it is enough to show the tentative top-level components that would constitute your system as well as the tentative inputs and outputs.

- Only student is needed to attach the report (make sure to indicate all the team members).
