

Homework 2

(Due date: October 5th @ 5:30 pm)

Presentation and clarity are very important! Show your procedure!

PROBLEM 1 (42 PTS)

- a) Perform the following additions and subtractions of the following unsigned integers. Use the fewest number of bits n to represent both operators. Indicate every carry (or borrow) from c_0 to c_n (or b_0 to b_n). For the addition, determine whether there is an overflow. For the subtraction, determine whether we need to keep borrowing from a higher bit. (10 pts)

Example ($n=8$):✓ $54 + 210$

$$\begin{array}{r}
 54 = 0 \times 36 = \begin{array}{cccccccc} \overset{c_7}{1} & \overset{c_6}{1} & \overset{c_5}{1} & \overset{c_4}{1} & \overset{c_3}{0} & \overset{c_2}{1} & \overset{c_1}{1} & \overset{c_0}{0} \\ 0 & 0 & 1 & 1 & 0 & 1 & 1 & 0 \end{array} + \\
 210 = 0 \times D2 = \begin{array}{cccccccc} 1 & 1 & 0 & 1 & 0 & 0 & 1 & 0 \end{array} \\
 \hline
 \text{Overflow!} \longrightarrow 1 \ 0 \ 0 \ 0 \ 0 \ 1 \ 0 \ 0 \ 0
 \end{array}$$

✓ $77 - 194$

$$\begin{array}{r}
 77 = 0 \times 4D = \begin{array}{cccccccc} \overset{b_7}{1} & \overset{b_6}{0} & \overset{b_5}{0} & \overset{b_4}{0} & \overset{b_3}{1} & \overset{b_2}{1} & \overset{b_1}{0} & \overset{b_0}{1} \\ 0 & 1 & 0 & 0 & 1 & 1 & 0 & 1 \end{array} - \\
 194 = 0 \times C2 = \begin{array}{cccccccc} 1 & 1 & 0 & 0 & 0 & 0 & 1 & 0 \end{array} \\
 \hline
 0 \ 0 \ 0 \ 0 \ 1 \ 0 \ 1 \ 1
 \end{array}$$

- ✓ $23 + 403$
- ✓ $103 + 204$
- ✓ $37 + 397$

- ✓ $77 - 128$
- ✓ $199 - 107$
- ✓ $236 - 257$

- b) We need to perform the following operations, where numbers are represented in 2's complement: (24 pts)

- ✓ $-61 + 128$
- ✓ $225 + 31$
- ✓ $-257 + 256$

- ✓ $-126 + 263$
- ✓ $-511 - 167$
- ✓ $137 + 886$

- For each case:

- ✓ Determine the minimum number of bits required to represent both summands. You might need to sign-extend one of the summands, since for proper summation, both summands must have the same number of bits.
- ✓ Perform the binary addition in 2's complement arithmetic. The result must have the same number of bits as the summands.
- ✓ Determine whether there is overflow by:
 - i. Using c_n, c_{n-1} (carries).
 - ii. Performing the operation in the decimal system and checking whether the result is within the allowed range for n bits, where n is the minimum number of bits for the summands.
- ✓ If we want to avoid overflow, what is the minimum number of bits required to represent both the summands and the result?

- c) Perform the multiplication of the following numbers that are represented in 2's complement arithmetic with 4 bits. (8 pts)

✓ 0101×0111 , 1000×1001 , 0101×1001 , 1100×1010

PROBLEM 2 (5 PTS)

- For the following 4-bit bidirectional port, complete the timing diagram (signals DO and $DATA$):

PROBLEM 3 (32 PTS)

- In these problems, you MUST show your conversion procedure. **No procedure = zero points.**
- a) Convert the following decimal numbers to their 2's complement representations: binary and hexadecimal. (12 pts)
✓ -101.65625, -255.6875, 31.625, -128.6875,
- b) Complete the following table. The decimal numbers are unsigned: (8 pts.)

Decimal	BCD	Binary	Reflective Gray Code
127			
		10111010	
			1110110101
512			
			10010101
		11101010	
			11011001
	100001110101		

- c) Complete the following table. Use the fewest number of bits in each case: (12 pts.)

REPRESENTATION			
Decimal	Sign-and-magnitude	1's complement	2's complement
-120			
			10101000
		0111010001	
			1000000
	1001111		
		10111111	
-64			
			10000011

PROBLEM 4 (21 PTS)

- a) What is the minimum number of bits required to represent: (3 pts)
✓ 65,537 colors? ✓ 32678 memory addresses in a computer? ✓ Numbers between 0 and 2048?
- b) A microprocessor has a 32-bit address line. The size of the memory contents of each address is 8 bits. The memory space is defined as the collection of memory positions the processor can address. (6 pts)
- What is the address range (lowest to highest, in hexadecimal) of the memory space for this microprocessor? What is the size (in bytes, KB, or MB) of the memory space? 1KB = 2^{10} bytes, 1MB = 2^{20} bytes, 1GB = 2^{30} bytes
 - A memory device is connected to the microprocessor. Based on the size of the memory, the microprocessor has assigned the addresses 0x40800000 to 0x40BFFFFF to this memory device.
 - What is the size (in bytes, KB, or MB) of this memory device?
 - What is the minimum number of bits required to represent the addresses only for this memory device?
- c) The figure below depicts the entire memory space of a microprocessor. Each memory address occupies one byte. (12 pts)
- What is the size (in bytes, KB, or MB) of the memory space? What is the address bus size of the microprocessor?
 - If we have a memory chip of 8MB, how many bits do we require to address 8MB of memory?
 - We want to connect the 8MB memory chip to the microprocessor. For optimal implementation, we must place those 8MB in an address range where every single address share some MSBs (e.g.: 0x00000000 to 0x07FFFFFF). Provide a list of all the possible address ranges that the 8MB memory chip can occupy. You can only use any of the non-occupied portions of the memory space as shown below.
